An Index of U.S. Voluntary Engineering Standards

William J. Slattery, Editor

This computer-produced Index contains the permuted titles of more than 19,000 voluntary engineering and related standards, specifications, test methods, and recommended practices, in effect as of December 31, 1969, published by some 360 U.S. technical societies, professional organizations, and trade associations. The title of each standard can be found under all the significant key words which it contains. These key words are arranged alphabetically down the center of each page together with their surrounding context. The date of publication or last revision, the standard number, and an acronym designating the standards-issuing organization appear as part of each entry. A list of these acronyms and the names and addresses of the organizations which they represent are found at the beginning of the Index.

Key words: Engineering standards, index of; index of standards, recommended practices, specifications, and test methods; Key-Word-In-Context index of voluntary standards; standards, voluntary, index of.

1. Introduction

This computer-produced Index contains the permuted titles of more than 19,000 voluntary engineering and related standards, specifications, test methods, and recommended practices published by some 360 U.S. technical societies, professional organizations, and trade associations. The Index includes documents in effect as of December 31, 1969; it does not include Federal and Military, food and drug, local government (State, county, and city), foreign, or company standards and specifications.

The information contained in the Index was compiled by the Information Section of the Bureau's Office of Engineering Standards Services. The Information Section was established in 1965 as a result of a recommendation of the Panel on Engineering and Commodity Standards, better known as the LaQue Panel, calling for the establishment of a national standards information center. The first objective of the Information Section was to acquire, and organize into a reference collection, the engineering standards published by all the standardizing bodies in the United States. When a substantial number of standards had been received, the Information Section began to compile an Index of all the standards in the collection. It was decided that the key-word-in-context (KWIC) method of indexing by computer would be best suited for this large collection.

In December 1968, the Information Section announced that its resources were available to the public. The Section now functions as a technical library and as a referral activity which provides answers to questions on engineering standards and standards activities and directs inquirers to the appropriate standards-issuing organizations for copies of published standards. Government and industry groups and private individuals who have questions on engineering standards, or who are trying to determine if standards exist for specific items, may call or write for assistance from the Information Section. They may also use the library and the KWIC Index to find the answers themselves. The library is open to the public Monday through Friday from 8:30 a.m. to 5:00 p.m. It is located in Building 225, Room B151, at the NBS site in Gaithersburg, Maryland, 20 miles outside of Washington, D.C. To make arrangements for onsite use of this collection, or to make telephone inquiries concerning standards, please call Area Code 301, 921–2587. Any questions or comments on the Index should be sent to the Information Section, Office of Engineering Standards Services, National Bureau of Standards, Washington, D.C. 20234.

2. How to Use the KWIC Index

2.1. Index Entries

An Index entry may contain as many as six items of information. The first item of information given is the title of the standard, specification, test method, or recommended practice. Generally, the key words found in the title of a standard are sufficient to identify the article or articles covered by the standard; however, in some instances the title has been augmented to include additional descriptive terms. The title of each standard is followed by the year of publication or last revision. The letter "T" following this date indicates that the document is a tentative standard not officially approved by the issuing organization.

When applicable, the third item of information consists of cross references to other organizations, besides the group originally issuing the standard, which have approved or adopted the standard and have assigned a number to it. These organizations are identified by a two or three letter acronym. The standard designations assigned by these organizations follow the acronym. The last two items of information given make up the standard's identification number. This alphanumeric number is always found in a column next to the right-hand margin of the Index. The first part of the number is an acronym identifying the group issuing the standard. As many acronyms as possible were chosen according to the first letter of each word in the organization's name, for example, ACS for the American Chemical Society and UL for the Underwriters' Laboratories, Inc. Other acronyms were assigned on the basis of the remaining available combinations of letters, for example, AHO for the Association of Home Appliance Manufacturers and NRY for the National Association of Relay Manufacturers. A list of acronyms and the corresponding organizations appears at the beginning of the Index.

The second part of the identification number, the standard number assigned by the issuing group, appears in the space after the acronym. If an organization has not assigned a number to a standard, there appears the designation "XYZ" plus a number 1, 2, 3, etc. The "XYZ" designation serves as a retrieval device for the staff of the Information Section. In several instances listed below, special letter designations were assigned by the Information Section to certain groups of standards published by the Association of American Railroads, and numbers were assigned to individual standards within those groups.

Examples:

CM	Communication Manual (Association of American Railroads)
EM	Electrical Manual (Association of American Railroads)
MSRP	Manual of Standards and Recommended Practices (Association of American Railroads)
SM	Signal Manual (Association of American Railroads)

Sample Entry

(1) (2) (3) (4) (5) (6)

ADHESION OF DRIED THERMAL INSULATING CEMENT (1965) ANS Z98.16 AST C353

(1) Title of standard

(2) Year of publication or last revision

(3) Acronym for the American National Standards Institute (formerly called the United States of America Standards Institute)

(4) Number assigned by the American National Standards Institute

(5) Acronym for the American Society for Testing and Materials

(6) Number assigned by the American Society for Testing and Materials

2.2. Reading the KWIC Index

The title of each standard can be found under all the significant key words which it contains. These key words are arranged alphabetically down the center of each page together with their surrounding context. Each title is assigned only one line in the Index; therefore, titles longer than one line have been cut by the computer. This truncation is indicated by a virgule (/) at the point where the title was

cut (see entry 1 in sample listing below). Occasionally both ends of a title will be truncated. When this condition occurs the virgule will be omitted. Missing portions of a title can be found by locating in the Index one or more of the title's other key words.

An entry line is read from left to right beginning after the longest blank space in the line and ending at the identification number. If the longest blank space is not at the beginning of the line, the entry will be continued at the left hand margin of the same line, as shown in entries 1 and 3. Because of the variable width characters, when a line is truncated the line does not print full left and right.

Sample Entries

(1)	ngs of Fractional Horsepower Induction Motors */Temperature on Windi	EE 114A
(2)	*Thermal Protectors for Motors (1966) ANS C 33.26	UL 547
(3)	In Hazardous Locations (1964) *Electric Motors and Generators for Use	UL 674A

*Entry begins at this point

The following abbreviations are used in the Index:

BPVC Boiler and Pressure Vessel Code (American Society of Mechanical Engineers)

NWAHACC National Warm Air Heating and Air-Conditioning Code (Sheet Metal and Air Conditioning Contractors National Association)

The computer programs for the Index were prepared by the Office of Computer Information, Center for Computer Sciences and Technology, National Bureau of Standards.

3. List of Acronyms and Organizations

AA The Aluminum Association
